- Well versed in editing software such as Adobe Photoshop and Lightroom.
- Proficient in managing large volumes of data across cloud platforms and local storage systems
- Experience using terminal-based tools like PhotoRec for data recovery, navigating file systems and command-line interfaces.

SUMMARY

I have spent the last 10 years working passionately as a photographer and videographer in many different roles, such as weddings, dance competitions, and school portrait photography. During this time, I discovered a great love for working with people, building relationships, and making others feel heard and supported. Many of these jobs have been high-stakes and high-pressure, and sometimes people have been frustrated, but I genuinely enjoyed working under this pressure and navigating the broad spectrum of emotions that often come out at weddings. I have been looking to branch out into doing IT work, because it combines my love of working directly with people and problem solving. I have a wide technical background that has aided me in learning many different systems and software for my work, and I have goals to learn even more and acquire different certifications related to IT.
